

SD ST and SD Sport Application Instructions

Instructions - Surfaces

- Store at temperature of 65° F or higher for greatest efficacy. **Shake well before each use.**
- Surface must be clean of dirt, dust and oils prior to application.
- Test for staining and color- steadfastness of fabric or surface by treating and drying a small concealed area prior to application. SD T and SD Sport are water based.
- Spray entire surface area from a distance of 16 – 24 inches, ensuring complete coverage. Porous substrates and textiles will require greater amounts of product to account for absorption of SD ST™ into the treated area. See instructions below for treatment of electronic devices. Do not spray product or any liquids directly into ventilation, camera, speaker or other sensitive areas of electronic equipment or devices.
- Lightly wipe after 3 – 5 minutes with a clean microfiber or lint free cloth. Allow to dry thoroughly.
- If spotting or haze occurs, moisten a lint free microfiber towel or sponge with product and wipe the area dry.
- Comply with all applicable safety requirements. Wear required eye, respiratory and hand protection and observe proper chemical handling techniques.
- Dispose of unused product and product containers in accordance with local and federal requirements.
- Do not reuse product container

Application Instructions – Electronic Equipment

- Store at temperature of 65° F or higher for greatest efficacy. **Shake well before each use.**
- Surface must be clean of dirt, dust and oils prior to application.
- Test for staining and color- steadfastness of fabric or surface by treating and drying a small concealed area prior to application. SD T and SD Sport are water based.
- Moisten a clean lint free microfiber cloth with product and apply liberally to the surface you wish to treat. Use caution to avoid injecting liquid into sensitive components or openings (camera lenses, microphones, speakers etc.) Do not spray product or any liquids directly into ventilation areas of electronic devices.
- Lightly wipe after 3 – 5 minutes with a clean microfiber or lint free cloth. Allow to dry thoroughly.
- If spotting or haze occurs, moisten a lint free microfiber towel or sponge with product and wipe the
 - area until dry.
- Care should be used not to over-saturate areas which may be sensitive to liquids. Do not spray product or any liquids directly into ventilation, camera, speaker or other sensitive areas of electronic equipment or devices.
- Comply with all applicable safety requirements. Wear required eye, respiratory and hand protection and observe proper chemical handling techniques
- Dispose of unused product and product containers in accordance with local and federal requirements.
- Do not reuse product container
